Directive

Brand Guide

NOVEMBER 2020

Introduction

This brand style is meant to push the envelope creatively within the search marketing agency landscape. The brand elements detailed in this guide are meant to show users and viewers Directive is not afraid to take risks and be different.

Directive is a team of search marketing savants, creatives, and technical specialists who help in-house teams at software companies excel in competitive markets.

Logo

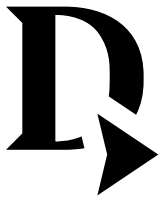

The wordmark to the right is the main logo for Directive. It is available as a png, ai, jpg, or eps file. The logo should be presented in black or white.

This icon serves as Directive's badge. It can be used when the Directive wordmark would be too small for preferred readability.

Wordmark

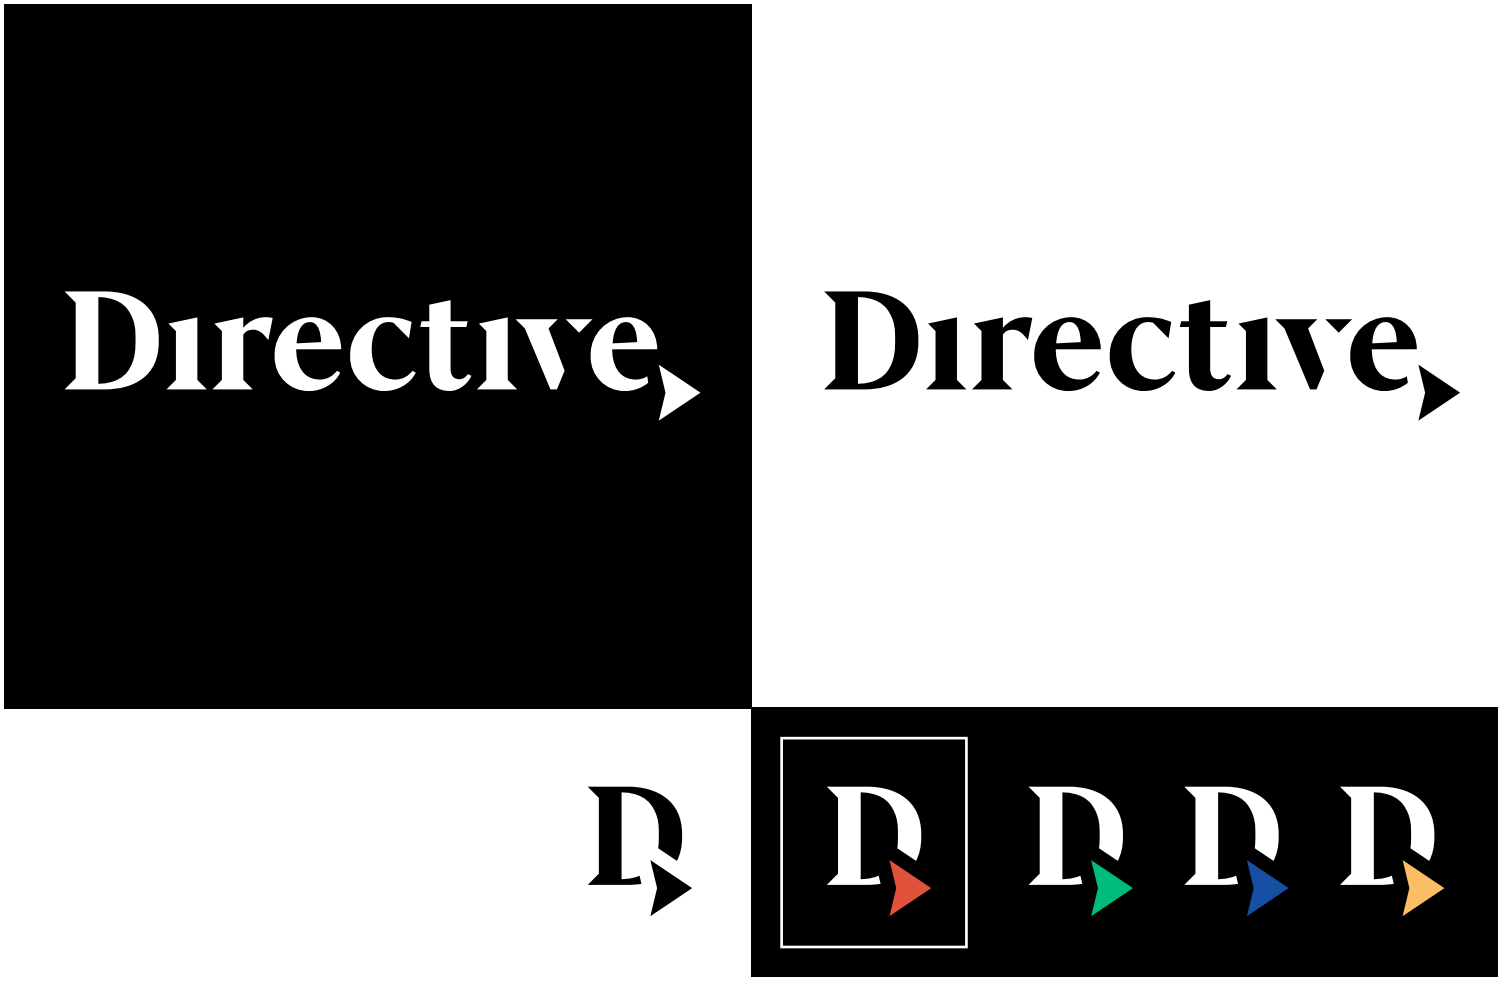

D + Arrow Icon

Logo Usage

Logo Explanation

The wordmark should be shown in either black or white, never colored. It should sit prominently with space above and below it leaving adequate padding. The D + arrow icon should primarily be shown either in black or white with an orange icon. If the background is orange or the content is about a sub-brand with a specific color association (pulse, society, etc), it is permisible to use one of the alternative colored icons to match the color palette.

Logo Non-Usage

No.

Never use the D + arrow icon in black with a colored arrow. Use only white D with colored arrow, or all black.

Don’t turn the Directive logo on its side or angle it. It should always sit horizontally and be easy to read.

Don’t stretch or squeeze the logo. Retain correct proportions.

Although outlines are part of our brand identity, do not apply this effect to the logo.

Do not add text underneath or above the wordmark.

Color

Our primary colors are black and white. Generally, **black and white** are used as background and text colors. The strategic use of b&w can create drastic contrasts that make the brand feel more bold and premium.

Our **main accent**, **Directive Orange** should be used for CTAs. It may also used as a general accent color.

Our secondary colors are meant to add personality and excitement. These should primarily be used as accent colors to add personality and flare. They may also be used as background colors.

The **Bright Pink tertiary accent** is meant to help make Directive memorable by utilizing an element that sets Directive apart from other agencies. It should be used sparingly and should never be used as a background color.

The Directive navy is a color used to replace black in specific uses such as calling to mind the Directive legacy or present itself itself in a more corporate light.

Typeface

Primary Font

Directive uses Trade Gothic Next as its main font. This typeface's two weights, bold and regular, are versatile and modern. It is meant to be both approachable & flexible, while also commanding an authority.

This brand incorporates contrasting type sizes. Use **Trade Gothic Next Bold** for larger display text sizes. Always use in title case or sentence case, never all caps or small caps. For web presentation where this font is not available, use font Roboto if absolutely necessary.

Accent Font

The Capitolium2 Bold font speaks to the professionalism and successful legacy of Directive. When this font is used creatively—following spline paths or offset as accent text—the typography communicates both expertise and bold risk-taking.

This font works great as callout or decorative text. For decorative text, set this type on a wavy or circular path.

Body Text

Lorem ipsum dolor sit amet, consectetuer adipiscing elit, sed diam nonummy nibh euismod tincidunt ut laoreet dolore magna aliquam erat volutpat. Ut wisi enim ad minim veniam, quis nostrud exerci tation ullamcorper suscipit lobortis nisl ut aliquip ex ea

Accent Text

Capitolium2 Bold

Always use Trade Gothic Next Bold as the primary header. The secondary header can either be bold or regular. When it makes sense, such as hero text or display typography, scale the text to more than half of the artboard to make a bold statement.

Use Capitlium2 Bold as accent text or decorative typography. This could work well for names and titles, or to highlight specific bold copy.

Typeography Guide

Write headers either left or right aligned.

Tracking value for headers
is generally between -30 & 0

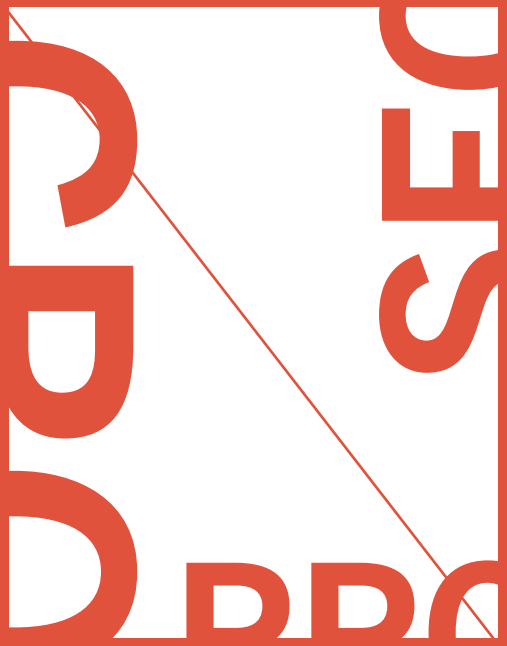

Always lowercase. Big and bold.

Contrast with smaller sub-headings

Better

Visual Elements

Brush / Scribbles / Highlighters

Use Directive's selection of curated brush strokes, scribbles, and highlighter effects. Play around with difference blend mode to mix colors creatively.

Dynamic Typography

Flexible typography is a key identity element unique to Directive within the marketing agency realm. See page **Typography Elements** for ideas and guidelines.

Grain Texture

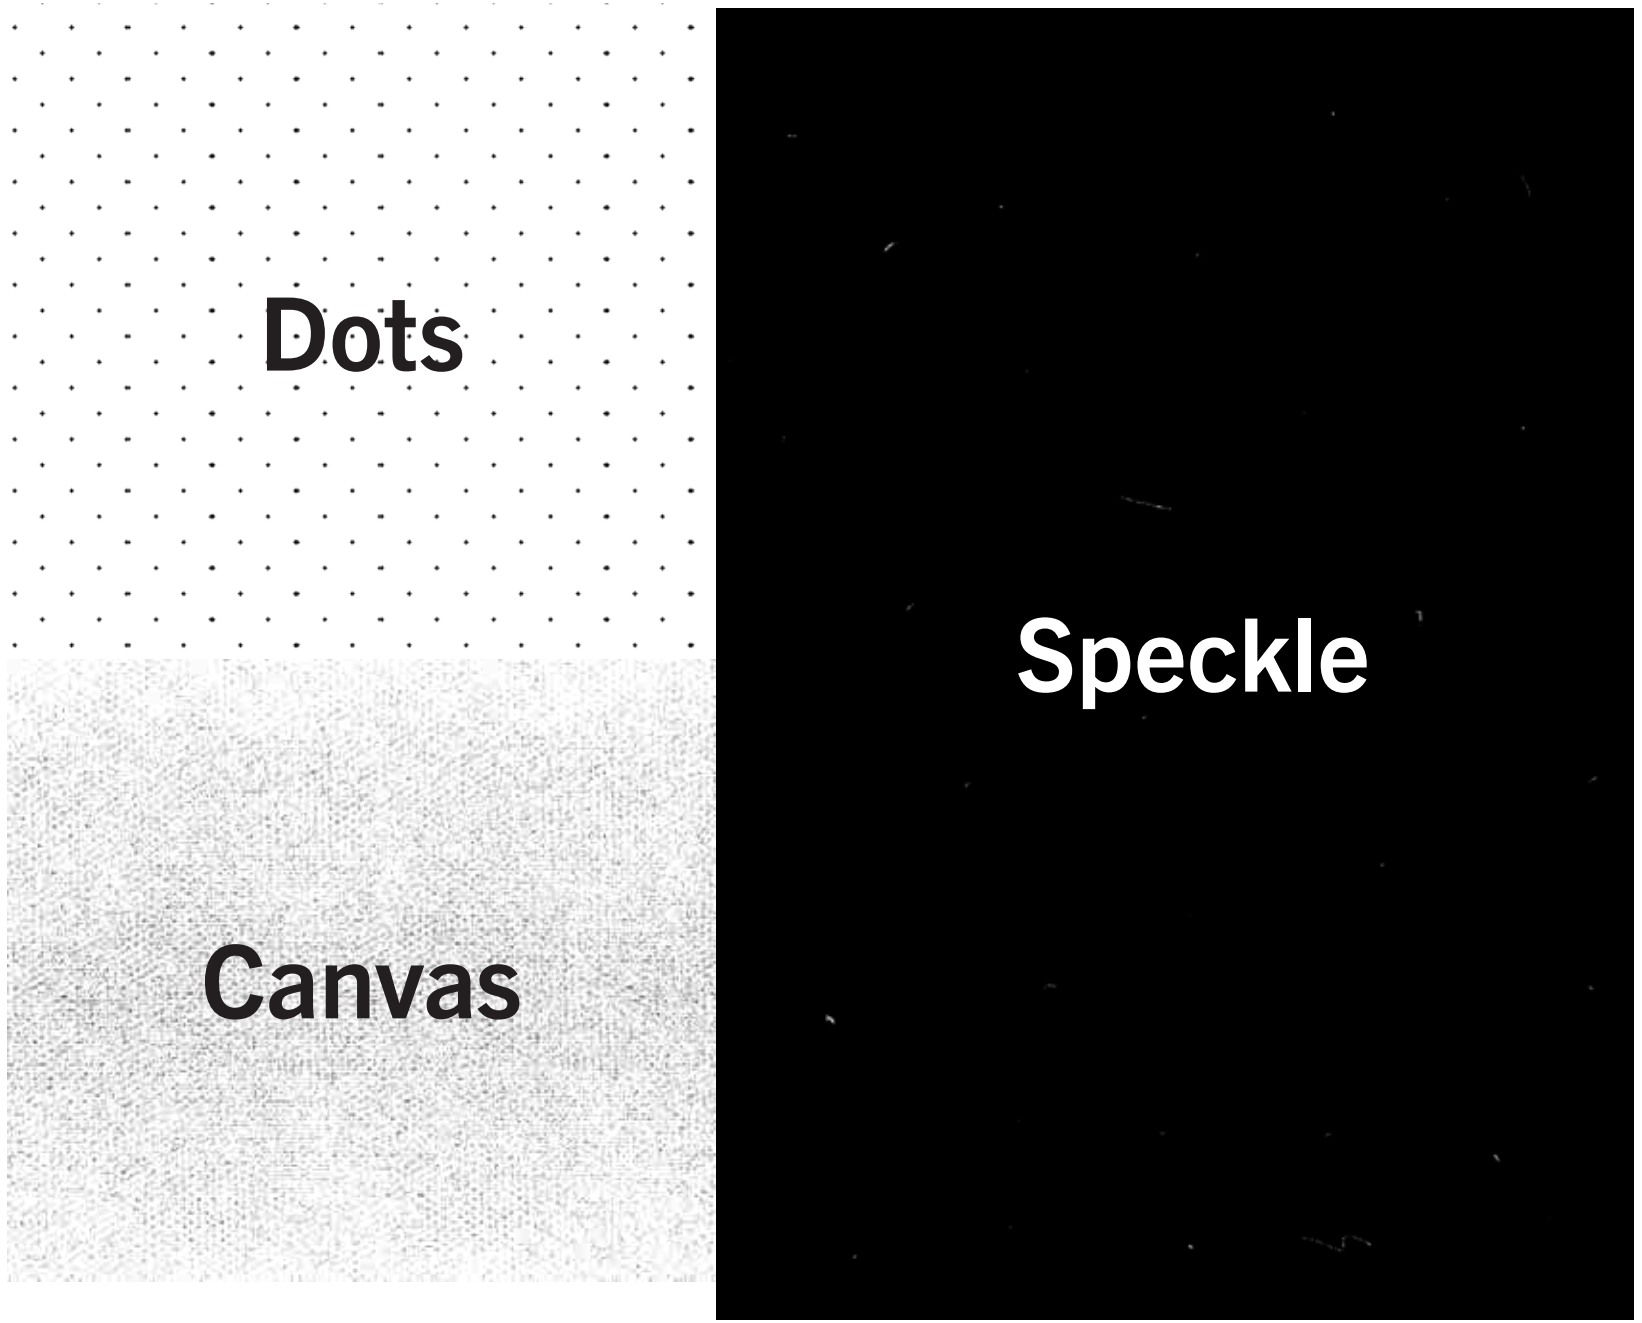

Use Directive's selection of textures. It's important to utlize this effect sparingly and subtly. For pictures, overlay fine film grains. For blank space, utilize subtle scratches.

Dotted Grid Texture

Use the dotted grid texture to create background elements. This is primarily used to subtly highlight key words. It can also be used as rectangle grids as decorative elements. Make sure the dots aren't too large or too fine.

Textures

Typography Elements

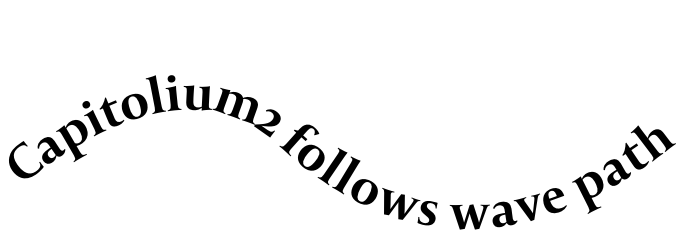

Text with dots

Use text to mask the dot texture. Looks best scaled up and placed in background.

Text follows path or shape

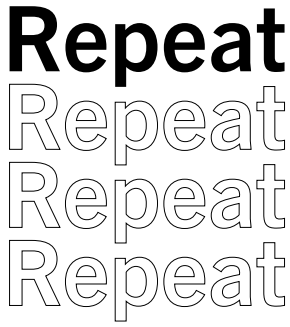

Place the accent font Capitolium2 on a path to add subtle phrases. See copy kit for approved phrases.

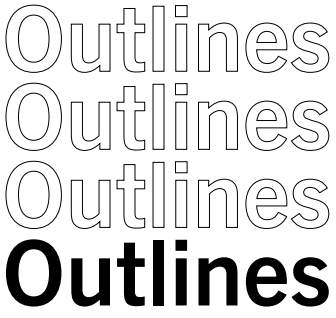

Repeated text

Emphasize a specific idea by repeating words vertically and pairing with outlined text.

Outlined text

Use a thin stroke to outline text and use as background elements.

Large text

Add power to design by blowing up text and placing in background and on margins. To create a more subtle effect, make the text a thin outlined stroke in either white or black.

Imagery

Two-Tone Tint Filter

On special circumstances, such as hover over animations on a page or video animations, pictures can be highlighted with a two-tone tint filter with the black mapped to Varsity Blue (#004EA8).

Imagery

Human Element

Directive's culture of *people first* shines through in its imagery. Each photo should portray authenticity, enjoyment, hard work, and professionalism. It is key that imagery evokes a sense of approachability, support, and committment.

Workplace Environment

The main environment is the workplace—whether from home or office. Regardless of location, the photo should portray Directive's goal-focused and performance-driven personality.

Black & White Process

Directive imagery should be displayed in black and white. As a general rule, shadows should be lowered, but the black point should be slightly raised. This in effect creates a subtle vintage fade.

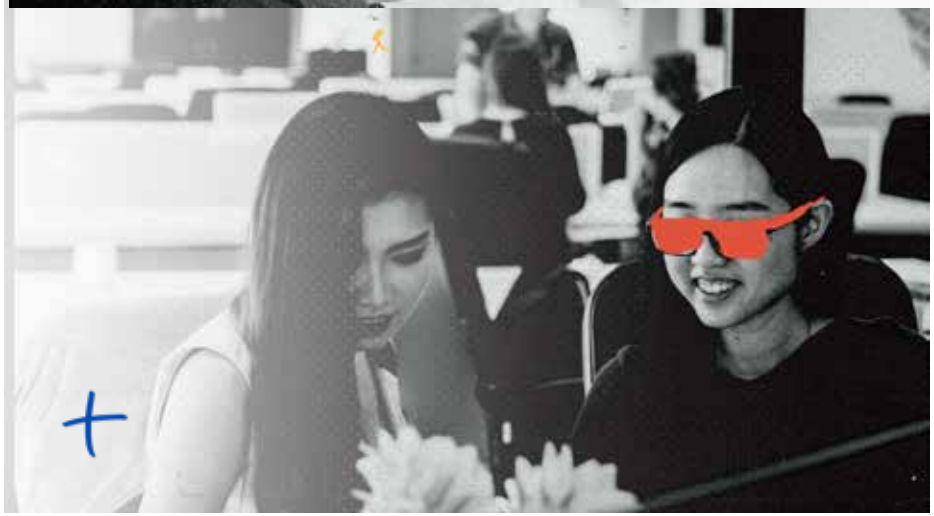

Grain/Scratches Texture

Each image should have a tactile quality to it. This is achieved through texture overlays. Grain/scratch textures can be set to the *Classic Difference* blend mode to achieve this effect.

Brush/Scribble/Highlighter Elements

To add some personality and color to these photos, the occasional doodle or brush element should be incorporated.

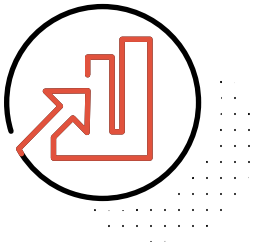

Dot Element

An additional layer may include the dotted grid element. This can be used to pull more of the brand style into the image and create supplemental texture.

Iconography

Organic SEO

Increase volume

Increase revenue

New opportunities

The Directive brand uses iconography sparingly. Icons are comprised of thin, minimalistic lines in two colors: Directive Orange and either black or white. When applicable, icons should try to maintain one continuous line. The icons should try to incorporate a single element of orange and an optional dot element as a shadow. If the icon will be viewed at a size smaller than 48x48 px, leave the dot element off.
